

ABSTRACT OF THE INVENTION

A rod connector 1 is provided with a rod supporting portion 9 in a part of a connector main body 11 supported to a leading end of a shank portion 3. A rod pressing portion 15 is provided in a side opposing to the rod supporting portion 9, and a rod 7 is clamped and fixed by the rod pressing portion 15 and the rod supporting portion 9. At this time, small convex portions 25 provided in the rod supporting portion eat into the rod 7.
